

## On-TOP YUTEC™: flying insect control equipment.

It is a well-known fact that insects always fly up to the light. There they get into the **On-TOP YUTEC™** unit, which quietly and immediately kills them with the help of a glueboard.

All units are made of corrosion resistant metal and remain in good condition for many years.

YUTEC thanks you for the good choice you have made. We are sure you will not regret it.

## Specifications

Model	Body color	Power consumption	Protection (m <sup>2</sup> )		Information		Glueboard
			Op.	Max.	Dimensions (mm) L x W x H	Weight (kg)	
On-TOP YUTEC OT-60	White / Stainless steel	24 Bt	60	180	150 x 595 x 90	1,7	GB-29Y
On-TOP YUTEC OT-120	White / Stainless steel	32 Bt	120	360	595 x 595 x 90	4,1	GB-28Y

## Unique design

The unit's design mimics that of an Armstrong ceiling lighting fixture. This allows embedding it directly into the suspended ceiling without any damage to the room's design.

Glueboards are yellow, white or black and bear a logo. But on request we can put YOUR logo on them and change the color of the side visible to visitors to any you like.

When there is no glueboard in the holder, the unit acts as an additional powerful light source, which is useful, for example, in autumn and winter when there are no insects but there is a need for more light. You can also put a light filter of any color instead of the glueboard or together with it.

The units' design is original and unique. Their construction makes them a perfect insect control solution for virtually any space, including dusty and humid environments.

## Extensive protection area

**On-TOP YUTEC™** units are quite efficient for their class and can be used to protect large areas from flying insects.

## KILLS

**ABSOLUTELY ALL FLYING INSECTS:  
FROM SMALL MIDGES TO CHAFER  
AND LOCUST**

The special pheromone-laced glueboard attracts and unfaillingly kills insects such as midges, mosquitoes, flies, wasps, moths, horseflies, whiteflies, fungus gnats, chafer, locust, tobacco beetle, carabus, etc.

## New powerful light sources

Unlike typical units, models of the **On-TOP YUTEC™** line are installed with powerful LED emitters with guaranteed 80,000 hours (10 years) of stable performance. Thus, you do not need to replace tubes and starters every year nor care about their utilization.

There is also no need to purchase special and expensive unbreakable (shatterproof) insecticidal tubes every year, which is a mandatory requirement at food production and pharmaceutical factories as well as kindergartens and schools.

## Rugged construction

There are two versions of the units: enameled steel (white) and food grade stainless steel. Closed design makes them absolutely safe in service and suitable for installation at a workplace. All devices also feature protective earthing.

## Mounting options

**On-TOP YUTEC™** units are easily integrated into a suspended ceiling. You do not need any tools to install. At the same time, the unit's design makes it mountable on any ceiling (wood, concrete, corrugated cardboard, etc.) as well as a wall.

## Easy cleaning and maintenance

The special LARGE glueboard guarantees extended service life and keeps captured insects out of sight of visitors. Replacing the glueboard is simple and takes only 7 seconds, requiring no tools at all. The unit itself remains in place all the time.

## Quality certificate

Complies with Euro standards, SanPin and GOST-R.

## Reliability

Guaranteed service life of at least 5 years.
